A Day In the Life: Healthcare

Assuring the digital identity of employees, customers and partners to protect networks, applications and data.

Throughout the day, your users need to prove their identity to access the systems and applications required to do their job. Until now, IT had to make a difficult choice: either enforce cumbersome authentication requirements that frustrate end users, or relax authentication security for convenience and usability.

However, trading security for ease-of-use has serious ramification for healthcare providers. Constantly on the move, doctors and nurses have a critical need to securely access patient health records when seconds count, wherever they are, with whatever access device is available. With DigitalPersona Composite Authentication, you no longer need to trade ease-of-use for security. Security policies can be based on risk and applied with flexibility. The result? You can assure the security of all your digital assets while allowing users to get their job done – free from burdensome security hurdles.

Employer		Employee
Full protection of electronic health records in compliance with HIPAA security rules	**8:00 am**	I get to the hospital and have immediate access to the medical records I need
Adherence to best practices that help prevent medication errors	**11:00 am**	I know my patients will get the correct medications I prescribe
Elimination of risk around fraudulent claims through proof of identity	**1:00 pm**	I easily work within my patients' insurance guidelines and maximize their coverage rights
Secure log-in for shared devices	**3:00 pm**	I can move throughout the hospital – using shared workstations that I can securely log into – in order to get the information I need
Backing by undisputed records that adheres to best practices and laws	**5:00 pm**	I go through my day doing my work and am able to focus on providing patients with the best possible care
Compliance with DEA regulations for e-prescribing controlled substances		I can conveniently dispense controlled substances for my patients as needed
